Governance of Biodiversity and Ecosystem Services

Some thoughts on governance problems...

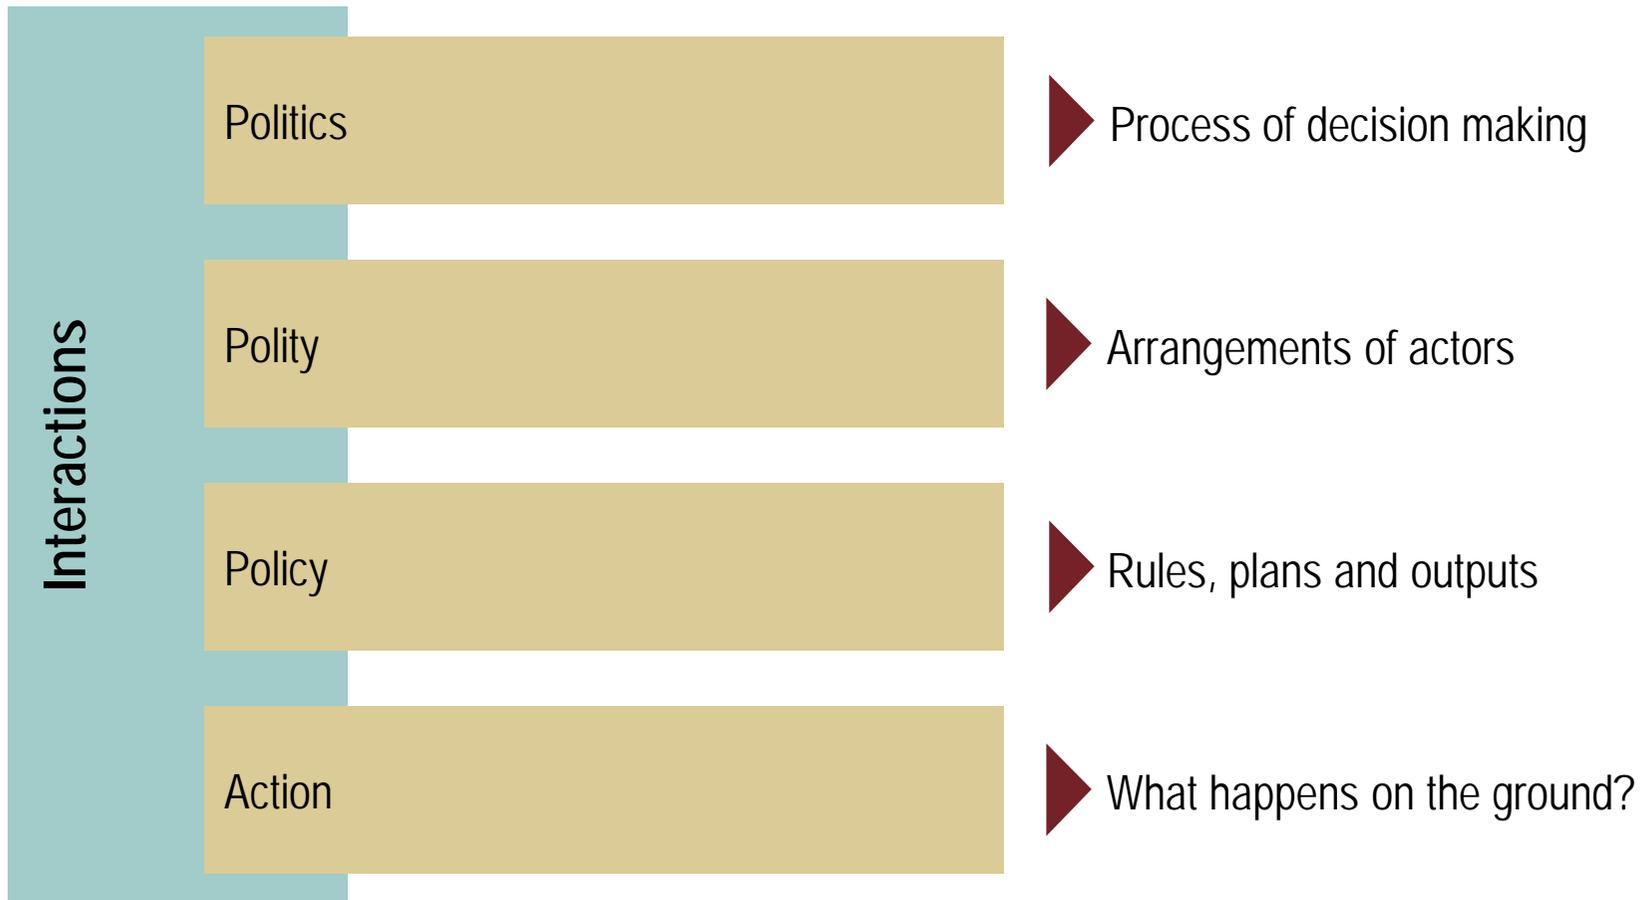

Outline

- What do we mean when we talk about governance of biodiversity and ecosystem services?
 - Policy
 - Politics
 - Polity
- The Governance Context
 - EU governance system
 - PES as a global trend
- Core challenges (in my opinion)
 - Power
 - Scale
 - Implementation and knowledge... to follow!

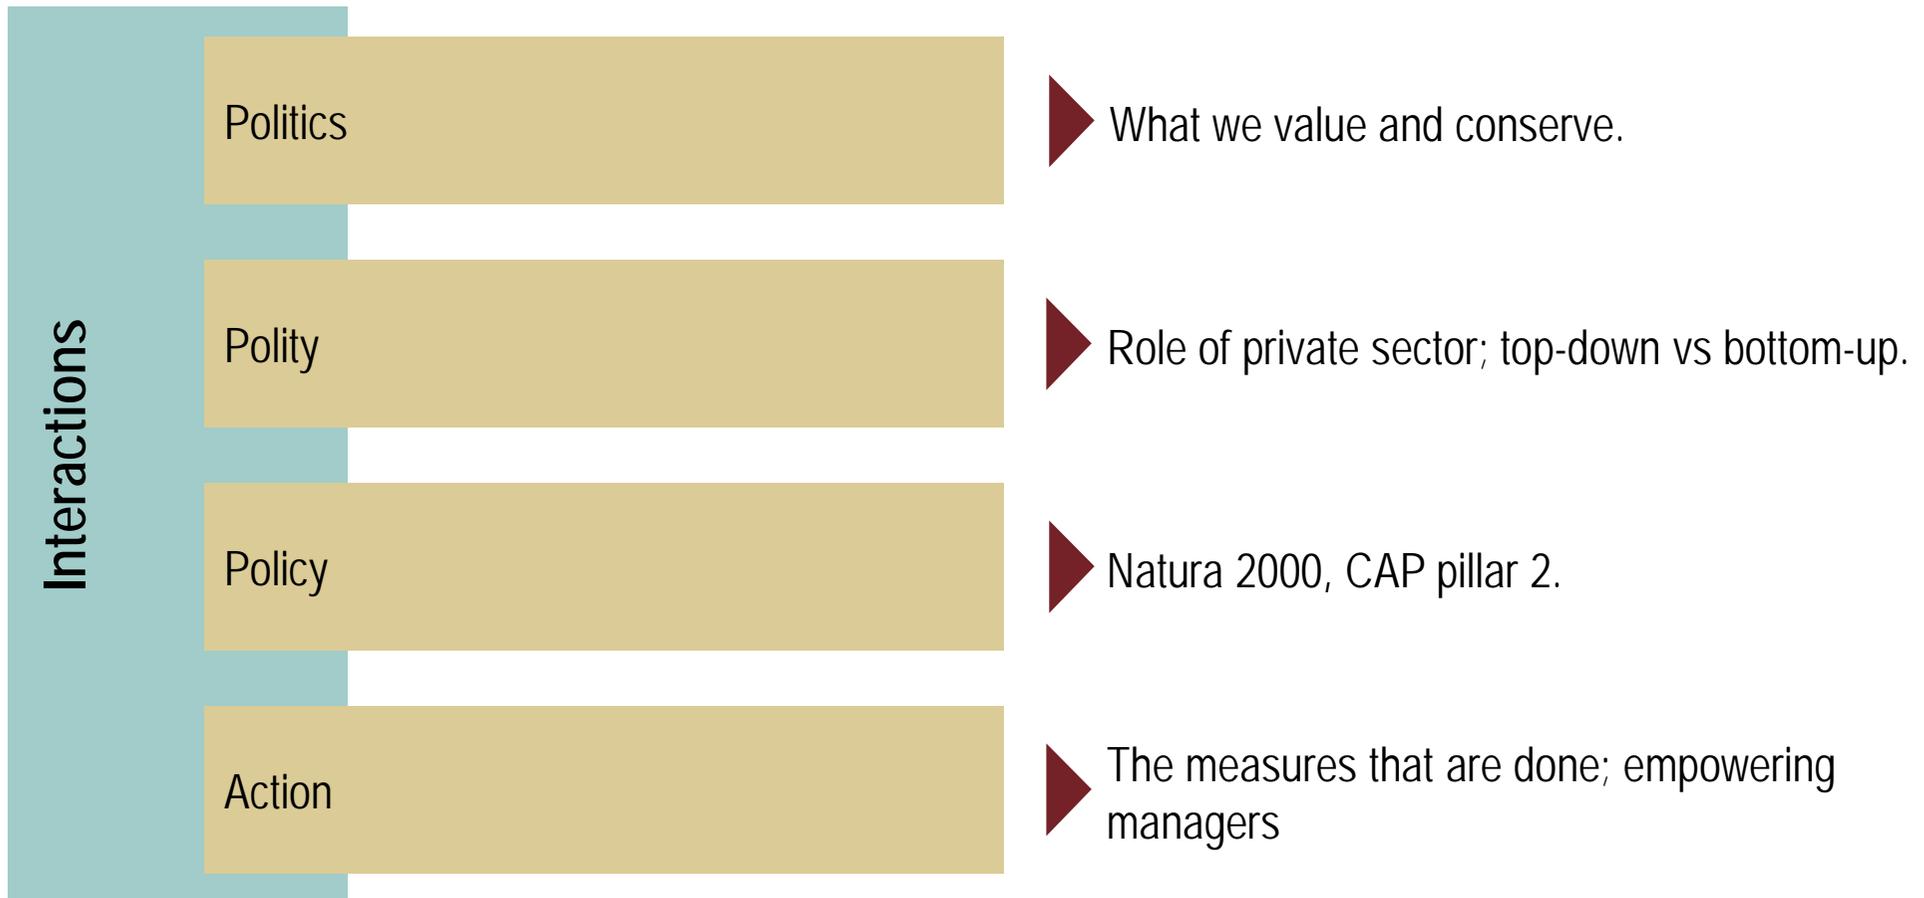

What do we mean by governance?

What do we mean by governance?

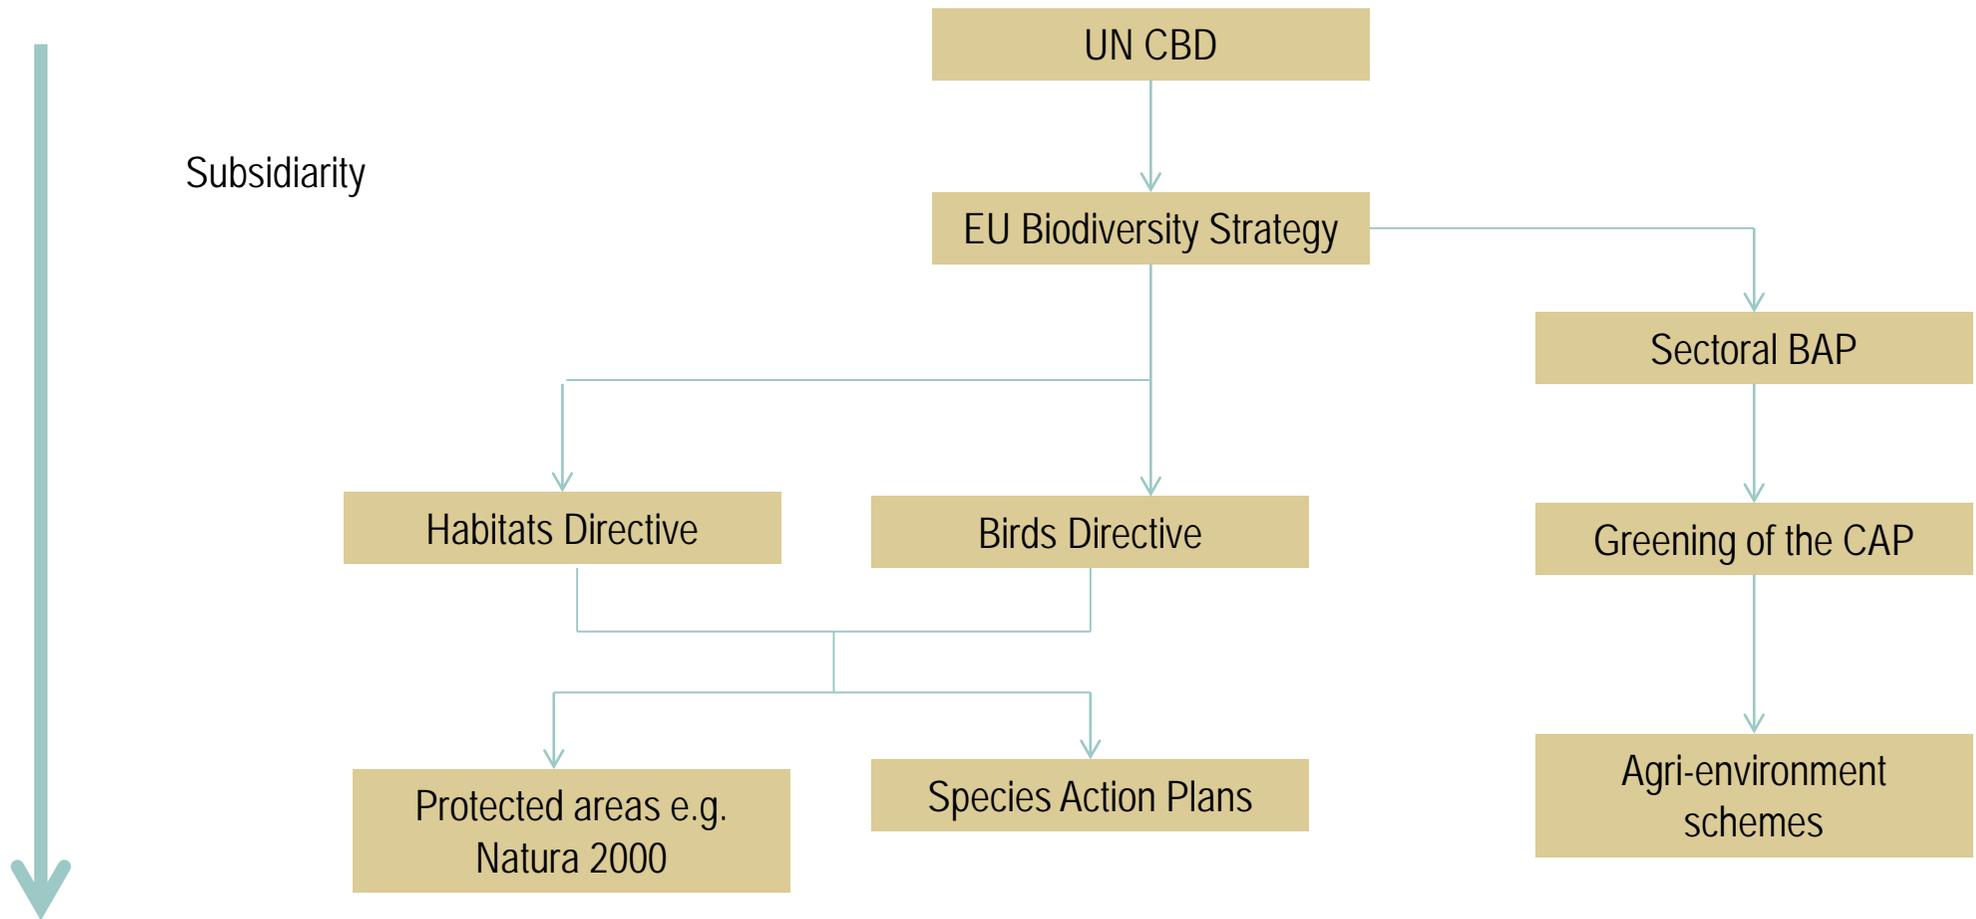

The Governance Context: EU

Multilevel governance system

Goals

Subsidiarity

Actions

The Governance Context: EU

- Common Agricultural Policy as core biodiversity policy in EU agricultural landscapes
 - Production policy
 - Gradual addition of environmental objectives, most recently 2013
- Compulsory
 - Pillar 1
 - Ecological Focus Areas
- Voluntary
 - Agri environment schemes

The Governance Context: PES

- Millennium ecosystem assessment
 - A call to action
 - Explicit agenda for using ecosystem services in economic decision making
- Carbon markets
 - Voluntary carbon market
 - REDD+
- CAP pillar 2?
- Results based payments for ecosystem services
- Private companies

The Governance Context: PES

— Millennium ecosystem assessment

- A call to action
- Explicit agenda for using ecosystem services in economic decision making

— Carbon markets

- Voluntary carbon market
- **REDD+**

— **CAP pillar 2?**

— *Results based payments for ecosystem services*

— Private companies

The Governance Context: PES Carbon Markets

The Governance Context: PES Private Companies

Yorkshire Water moorland sites

The Yorkshire Water project is protecting active blanket bog by restoring bare and eroding peat in the South Pennine Moors Special Area of Conservation and Special Protection Area.

The sites include Heptonstall and Widdop, Humberstone Bank, High Woodale and Katty White's Allotment in Nidderdale, Thurlstone and Soyland and are typical of the degraded moorland we are aiming to restore to its former state.

On all of these sites the blanket bog has been severely damaged by:

- pollution that dates back to the industrial revolution
- wild fires
- erosion from wind and rain
- inappropriate grazing

Peat-forming Sphagnum moss, which has almost disappeared because of industrial pollution and wildfires, and other key upland plants - heather, (Calluna and Erica species), cottongrass, bilberry, cranberry and cloughmoss - will be introduced.

Costing the Earth

Moors for the Future took Radio 4's Tom Heap for a flyover of our work. The programme is available on the BBC website.

Moors for the Future?

[About the partnership](#)

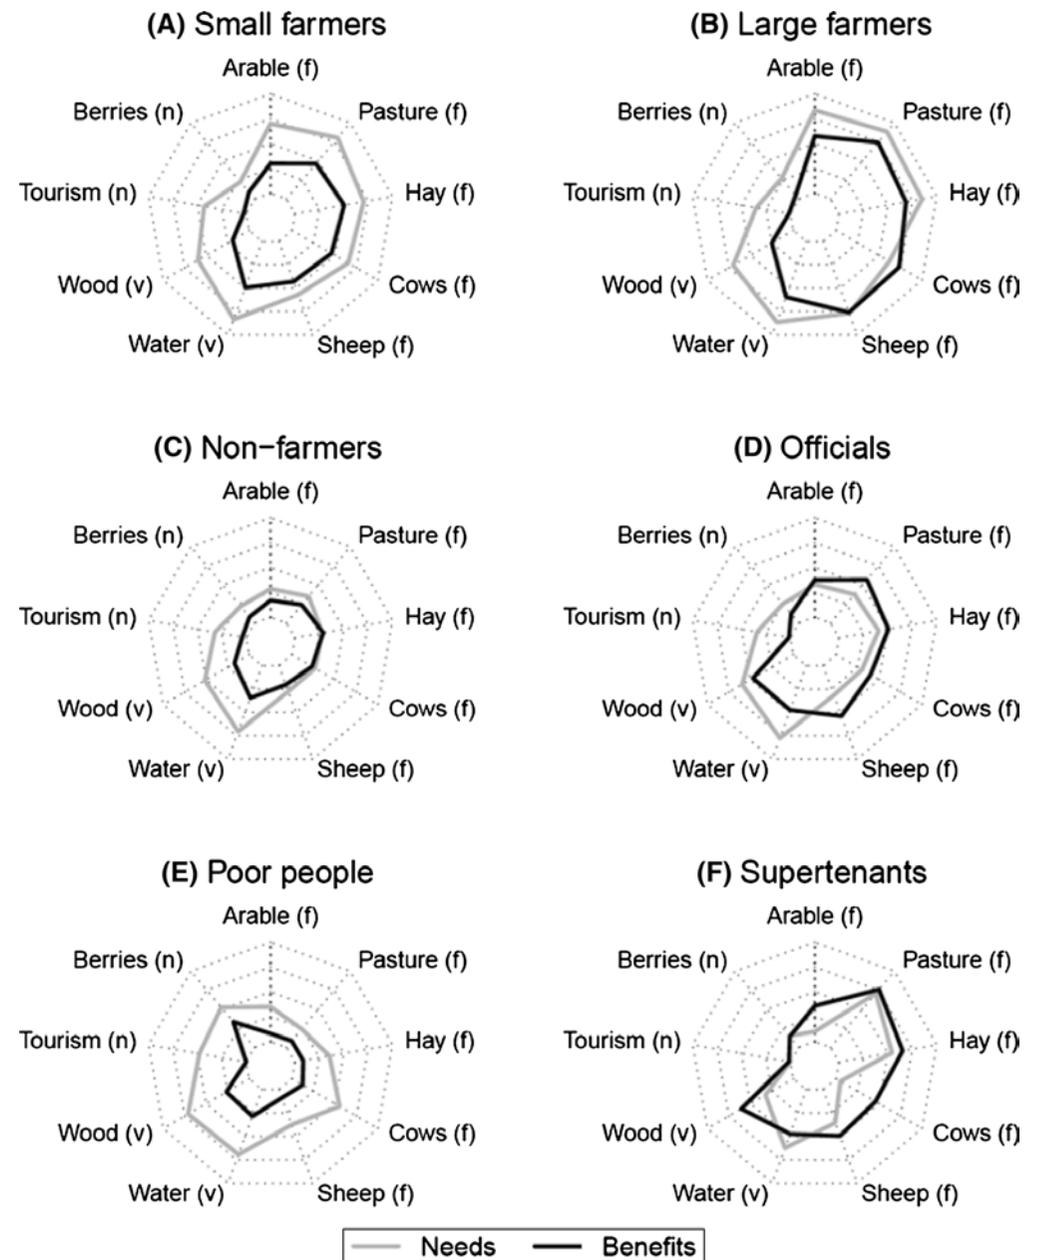

Core challenges: power

- What ES do we value?
- Who pays? (and who has the ability to pay?)
- Who benefits? (and what factors prevent or facilitate this)
- Balancing diverse wishes of actors with different powers to act

Core challenges: power

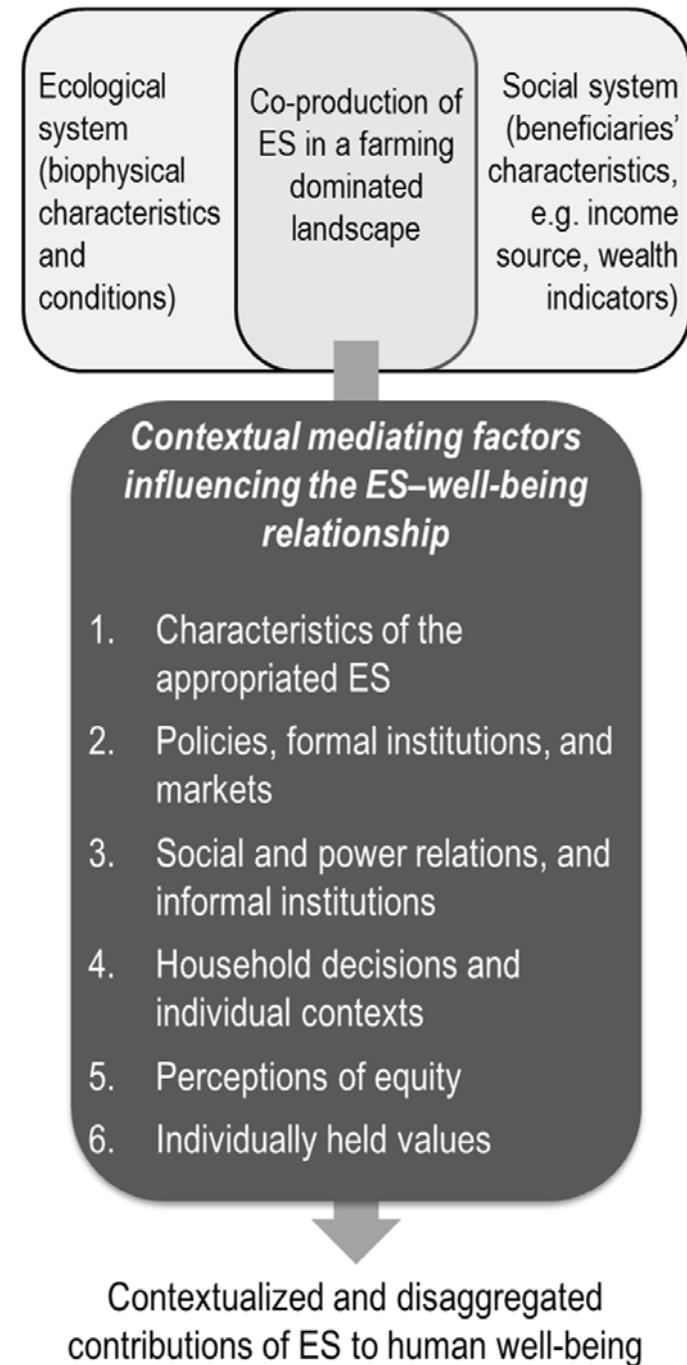

Milcu, Leventon et al., 2016. Disaggregated contributions of ecosystem services to human well-being: a case study from Eastern Europe. *Regional Environmental Change*. DOI 10.1007/s10113-016-0926-2.

Core challenges: power

Milcu, Leventon et al., 2016. Disaggregated contributions of ecosystem services to human well-being: a case study from Eastern Europe. *Regional Environmental Change*. DOI 10.1007/s10113-016-0926-2.

Core challenges: power

- Balancing diverse wishes of actors with different powers to act
- Who are we governing for?
- What do we want to protect?

- Politics – who's wishes?
- Polity – How does the system shape who gets a voice?
- Policy – who does the policy favour or penalise?

Core challenges: Scale

— Ecosystem scale is not the same as administrative scale.

— Time

- Short-term schemes (1-2 years)
- 10-year revisions

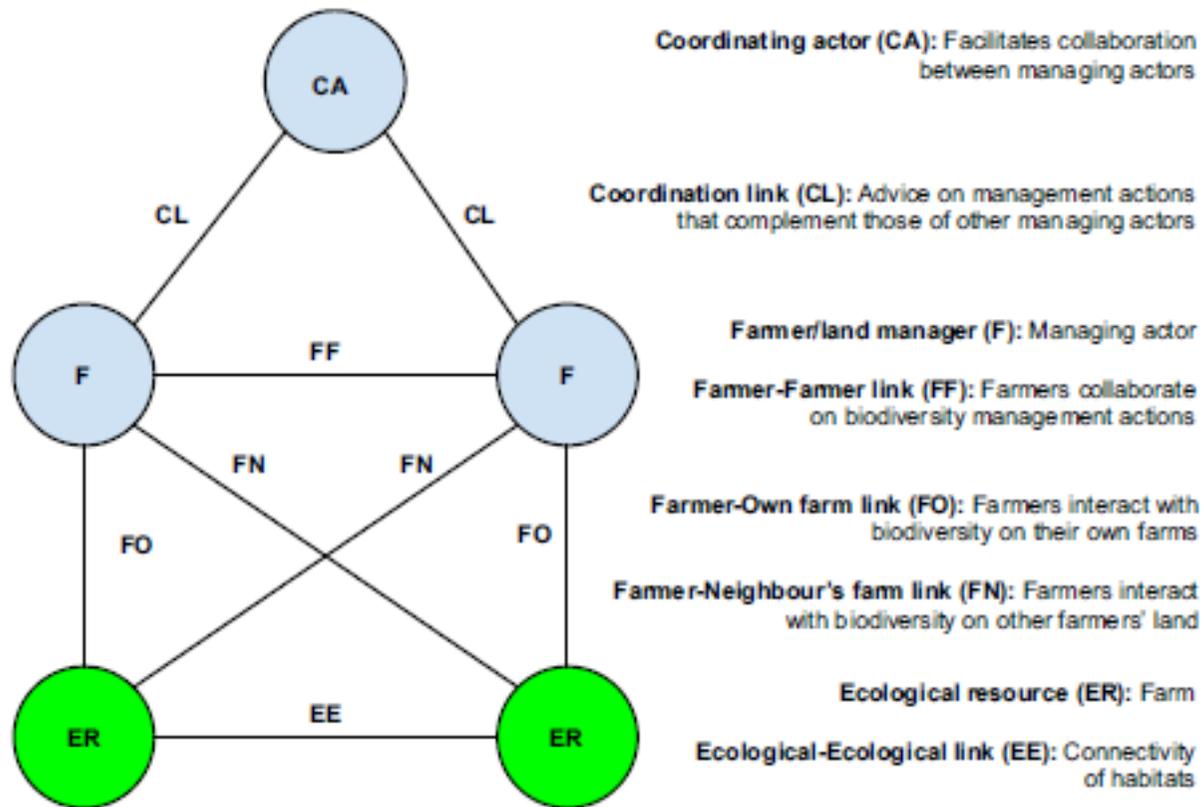

— Space

- Single farms
- Counties
- Countries

Core challenges: Scale

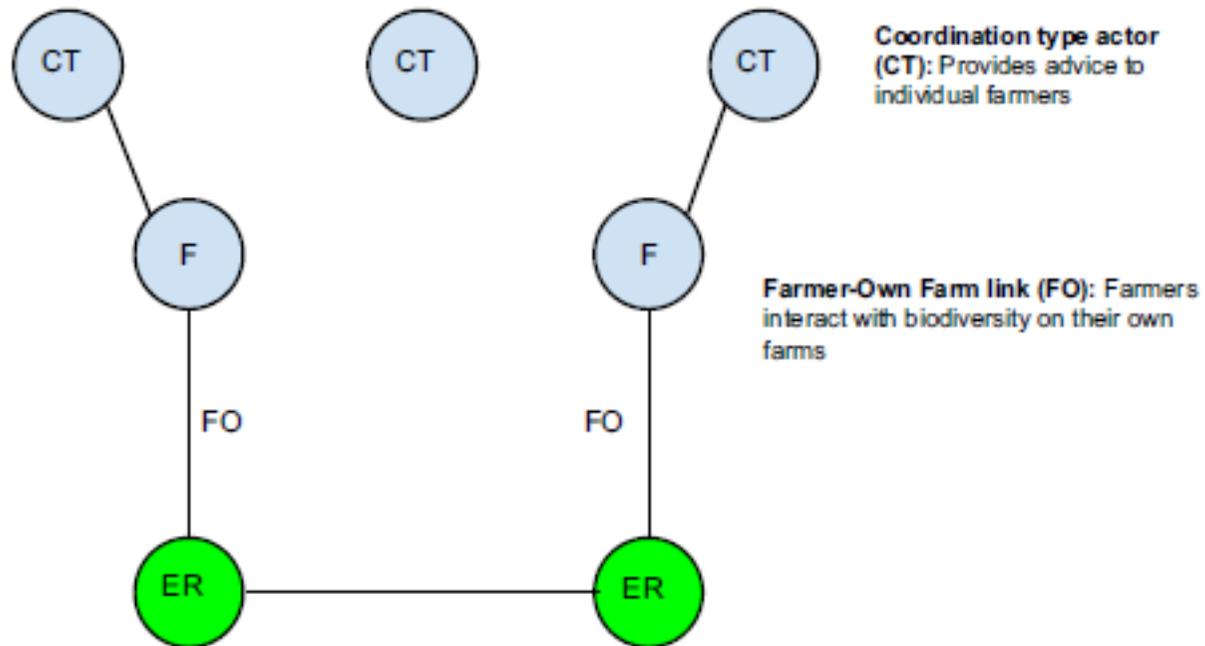

Leventon, Schaal et al., 2017. Collaboration or fragmentation? Biodiversity management through the common agricultural policy. Land Use Policy 64, 1-12.

Core challenges: Scale

Leventon, Schaal et al., 2017. Collaboration or fragmentation? Biodiversity management through the common agricultural policy. Land Use Policy 64, 1-12.

Core challenges: Scale

- Ecosystem scale is not the same as administrative scale.
- Politics – how to match administrative logic with ecosystem logic?
- Polity – how do we arrange actors around ecosystem scales?
- Policy – what do we actually ask people to do?

Summary

What do we mean by governance?

▶ Politics, polity, policy, action... and their interactions

Trends in governance

▶ The multilevel nature of EU biodiversity policy, and the global trend towards PES as a policy

Core challenges

▶ Power and scale as a result of interactions between social and physical world.

Future questions...
